

A close-up photograph of a male student with dark hair and a beard, wearing safety goggles and a yellow lab coat. He is looking down at a glass beaker held by a blue clamp on a metal stand. The background is a blurred laboratory setting with other equipment and bright overhead lights.

academic overview

knowledge leads to goals

Whether they chose to enroll in academic or career-technical programs, students took steps towards educational achievement this year. The college remained united despite having two separate academic divisions, and students were aided in their quest for knowledge and success. Students came together as one through various school projects, activities, and organizations on campus to find where they belong and further their comprehension of what it means to be an active member of society.

Advisors offered their services to all students. From scheduling courses to helping students choose a career path, the school advisors proved themselves by aiding students in discovering their true passions. Southwest fulfilled its guarantee to provide students with preparation for a four-year institution, and this could not have been achieved without the combined efforts of the encouraging administrative staff and outstanding academic departments. Every student was extremely grateful for the academic and career-technical programs for supplying promising futures and an unforgettable college experience to each person enrolled.
